AIM OF THE CONFERENCE

The problem of energy supply is global one, especially for countries with limited resources, as is the Republic of Moldova. The conference aims to provide a platform of debates for academics, experts from the energy sector, for decision makers in order to identify opportunities for regional integration of available sources of energy, renewable energy development, increase energy efficiency, new sources of energy etc. Based on the results of the conference is planned to develop a set of recommendations that form the basis of future energy policy documents as well as options for integration into the European energy market.
